

There are 5 semantic tags in HTML with description:

- ✓ **<header>:** Represent the header of a section or a document. Typically includes headings, logos, navigation menus, and other introductory content.
- ✓ **<nav>:** Defines a navigation menu or links to other pages or sections. It's used to wrap a set of navigation links on a webpage.
- ✓ **<main>:** Represents the main content of a document. It should not include headers, footers, or navigation elements, and there should be only one <main> element per page.
- ✓ **<article>:** Represent a self-contained piece of content that could be distributed and reused independently. It can include articles, blog post, news items, and other similar content.
- ✓ **<footer>:** Represent the footer of a section or a document. Typically contains metadata, copyright information, contact details, and links to related pages or documents.
